right wing

**HOW TO BUILD ASTRO-GNOME**

..... FOLD  
 \_\_\_\_\_ CUT

- You'll need a pair of scissors and some glue.
1. Have an adult help you cut out pieces as needed. Be sure to cut out the hole in the front of the helmet and the slots on the side of helmet. Fold crisply on dashed lines.
  2. Fold wings in half and glue front to back.
  3. Use small tab on end of wing to glue right wing to jet pack on the space marked R and glue left wing to space marked L.
  4. Glue dark blue tabs on jet pack to the matching spaces on Astro-Gnome's back.
  5. Fold arms in half and glue front to back, making sure not to glue the dark blue tabs on the end of arms together.
  6. Glue the blue right arm tabs to spaces marked RA on body, fold hand forward on dashed line.
  7. Glue the blue left arm tabs to spaces marked LA on body.
  8. Glue tab A-E to form body. Fold feet forward.
  9. Glue tab F to form collar. Fold tabs G and H down and glue inside body so beard is facing front and the tops of body and collar are flush.
  10. Insert ears on face through the slots on the side of the helmet so face shows through front of helmet and ears poke through sides.
  11. Glue tabs I and J to form top of helmet.
  12. Glue red tabs on body to spaces on bottom of helmet so face is on the same side as beard.
  13. Glue tabs K, L and M to finish Astro-Gnome.
  14. Help Astro-Gnome plant some Space Daises all over the solar system!
